printed in Belgium

Classified List of Contents

Adiabatic magnetization of superconductors, cooling by: *M. Yaqub* 101

Ainutdinov, M. S., Beketov, V. A., Selektor, Ya. M., and Zombrovskii, S. M. The sealing of glass viewing ports in liquid hydrogen bubble chambers . 237

Aslanian, J., and Weil, L. The cooling of specimens for calorimetry at very low temperatures . . 117

Atomic heats of tin and tin–indium: *M. Yaqub* . 166

Beketov, V. A., Selektor, Ya. M., Zombrovskii, S. M., and Ainutdinov, M. S. The sealing of glass viewing ports in liquid hydrogen bubble chambers . 237

Bewilogua, L., and Müller, E. A pressure cryostat with continuous refill 178

Blaisse, B. A proposal for a new nuclear demagnetization method 116

Blaugher, R. D., and Hulm, J. K. A direct reading constant volume gas thermometer . . . 229

Bligh, B. R., and Croft, A. J. The Clarendon Laboratory helium liquefier 231

Bloor, D., and Martin, D. H. The application of superconductivity to the detection of radiant energy 159

Bochirol, L., Doulat, J., and Weil, L. A cryogenic device for irradiation in liquid nitrogen . . 44

Brewer, D. F., Champeney, D. C., and Mendelssohn, K. Superfluidity and specific heat of liquid helium in 'Vycor' porous glass 108

Brown, E. H. On the properties of the vapour pressure curve 37

Buchhold, T. A. The magnetic forces on superconductors and their applications for magnetic bearings 203

Bunch, M. D., Corruccini, R. J., and Powell, R. L. Low temperature thermocouples—I. Gold–cobalt or constantan versus copper or 'normal' silver . 139

Carbon resistance thermometers for low temperatures, the preparation of miniature: *N. V. Zavaritskii and A. I. Shal'nikov* 235

Champeney, D. C., Brewer, D. F., and Mendelssohn, K. Superfluidity and specific heat of liquid helium in 'Vycor' porous glass. 108

Chaudhuri, K. D., Mendelssohn, K., and Thompson, M. W. The effect of radiation damage on the thermal conductivity of superconductors . . 47

Ciais, A., and Pesteil, P. Fine structure of the luminescence spectra of organic molecules in crystalline solutions 53

Cockett, A. H., and Molnar, W. Recent improvements in insulants 21

Cooling by adiabatic demagnetization of nuclear spins: *N. Kurti* 2

Corruccini, R. J., Powell, R. L., and Bunch, M. D. Low temperature thermocouples—I. Gold–cobalt or constantan versus copper or 'normal' silver . 139

Corsan, J. M. The superconductive transition in a transverse field at various orientations for thin tin films 180

Critical field of superconducting aluminium under pressure, the: *D. Gross and J. L. Olsen* . . 91

Croft, A. J., and Bligh, B. R. The Clarendon Laboratory helium liquefier 231

Cryogenics and radiation damage: *L. Weil* . . 129

Doulat, J., Weil, L., and Bochirol, L. A cryogenic device for irradiation in liquid nitrogen . . 44

Electrical and elastic properties of crystals, a precision laboratory cryostat for studying the: *V. A. Koptsik, B. A. Strukov, and L. A. Ermakova* . 222

— measurements on semiconductors, a cryostat for: *B. V. Rollin, J. R. Mills, and J. P. Russell* . . 75

— resistivity of plutonium, neptunium, and some plutonium alloys, the: *J. A. Lee, G. T. Meaden, and K. Mendelssohn* 52

Electrocaloric effect of ferroelectric ceramics at low temperatures, studies of the: *E. Hegenbarth* . 242

Enthalpies of mixtures, discussion on: *M. Ruhemann* 114

Ermakova, L. A., Koptsik, V. A., and Strukov, B. A. A precision laboratory cryostat for studying the electrical and elastic properties of crystals . . 222

Flynn, T. M. Studies of the low temperature distillation of hydrogen isotopes 96

Fradkov, A. B., and Lotkova, E. N. A metal cryostat for optical investigations on solids at low temperatures 238

Gas cryogenics, recent developments in: *H. O. McMahon* 65

— thermometer, a direct reading constant volume: *J. K. Hulm and R. D. Blaugher* 229

Gross, D., and Olsen, J. L. The critical field of superconducting aluminium under pressure . . 91

Hänny, J. A low temperature plant for the production of heavy water 81

Heavy water, a low temperature plant for the production of: *J. Hänny* 81

Hegenbarth, E. Studies of the electrocaloric effect of ferroelectric ceramics at low temperatures . . 242

Helium liquefier, the Clarendon Laboratory: *A. J. Croft and B. R. Bligh* 231

Hull, D., and Rosenberg, H. M. Metallography at liquid helium temperatures 27

Hulm, J. K., and Blaugher, R. D. A direct reading constant volume gas thermometer . . . 229

Hydrogen isotopes, studies of the low temperature distillation of: *T. M. Flynn* 96

Insulants, recent improvements in: *A. H. Cockett and W. Molnar* 21

Irradiation in liquid nitrogen, a cryogenic device for: *L. Bochirol, J. Doulat, and L. Weil* . . . 44

686537

Joule–Thomson helium liquefier and some problems in its design, a: *D. H. Parkinson* . . 17
Koptsik, V. A., Strukov, B. A., and Ermakova, L. A. A precision laboratory cryostat for studying the electrical and elastic properties of crystals . . 222
Kropschot, R. H. Multiple layer insulation for cryogenic applications 171
Kurti, N. Cooling by adiabatic demagnetization of nuclear spins. 2
Lee, J. A., and Meaden, G. T. A cryostat for studying transuranic substances 33
—, —, *and Mendelssohn, K.* The electrical resistivity of plutonium, neptunium, and some plutonium alloys 52
Liquid hydrogen bubble chambers, the sealing of glass viewing ports in: *V. A. Beketov, Ya. M. Selektor, S. M. Zombrovskii, and M. S. Ainutdinov* 237
— oxygen as a function of pressure and temperature, density of: *A. Van Itterbeek and O. Verbeke* . 77
Lock, J. M. The problem of the superconducting solenoid for the production of very high magnetic fields 243
Lotkova, E. N., and Fradkov, A. B. A metal cryostat for optical investigations on solids at low temperatures 238
Lounasmaa, O. V. The specific heat at constant volume, the entropy, the internal energy, and the free energy of liquid helium-4 between 1·2 and 2·9° K 212
Low temperature refrigeration: *M. Ruhemann* . 193
Luminescence spectra of organic molecules in crystalline solutions, fine structure of the: *A. Ciais and P. Pesteil* 53
Magnetic forces on superconductors and their applications for magnetic bearings, the: *T. A. Buchhold* 203
Martin, D. H., and Bloor, D. The application of superconductivity to the detection of radiant energy 159
McMahon H. O. Recent developments in gas cryogenics 65
Meaden, G. T., and Lee, J. A. A cryostat for studying transuranic substances 33
—, *Mendelssohn, K., and Lee, J. A.* The electrical resistivity of plutonium, neptunium, and some plutonium alloys 52
Mendelssohn, K., Brewer, D. F., and Champeney, D. C. Superfluidity and specific heat of liquid helium in 'Vycor' porous glass . . . 108
—, *Lee, J. A., and Meaden, G. T.* The electrical resistivity of plutonium, neptunium, and some plutonium alloys 52
—, *Thompson, M. W., and Chaudhuri, K. D.* The effect of damage on the thermal conductivity of superconductors 47
Metallography at liquid helium temperatures: *D. Hull and H. M. Rosenberg* 27
Mills, J. R., Russell, J. P., and Rollin, B. V. A cryostat for electrical measurements on semiconductors. 75
Molnar, W., and Cockett, A. H. Recent improvements in insulants 21
Müller, E., and Bewilogua, L. A pressure cryostat with continuous refill 178
Multiple layer insulation for cryogenic applications: *R. H. Kropschot* 171
Nuclear demagnetization method, a proposal for a new: *B. S. Blaisse* 116
Olsen, J. L., and Gross, D. The critical field of superconducting aluminium under pressure . . 91
Optical investigations, cryostats for: *P. Pesteil and R. Philip* 49
— — on solids at low temperatures, a metal cryostat for: *E. N. Lotkova and A. B. Fradkov* . . 238
— studies at low temperatures, a high pressure bomb for: *A. K. Tomashchik* 239
Parkinson, D. H. A Joule–Thomson heliuml iquefier and some problems in its design . . . 17
Parry, W. E., and ter Haar, D. On the specific heat of liquid helium in Brenig's theory . . . 41
Pesteil, P., and Ciais, A. Fine structure of the luminescence spectra of organic molecules in crystalline solutions 53
— *and Philip, R.* Cryostats for optical investigations 49
Philip, R., and Pesteil, P. Cryostats for optical investigations 49
Powell, R. L., Bunch, M. D., and Corruccini, R. J. Low temperature thermocouples—I. Gold–cobalt or constantan versus copper or 'normal' silver . 139
Pressure cryostat with continuous refill, a: *L. Bewilogua and E. Müller* 178
Radiant energy, the application of superconductivity to the detection of: *D. H. Martin and D. Bloor* . 159
Radiation damage on the thermal conductivity of superconductors, the effect of: *K. D. Chaudhuri, K. Mendelssohn, and M. W. Thompson* . . 47
Rollin, B. V., Mills, J. R., and Russell, J. P. A cryostat for electrical measurements on semiconductors . 75
Rosenberg, H. M., and Hull, D. Metallography at liquid helium temperatures 27
Ruhemann, M. Discussion on enthalpies of mixtures 114
—. Low temperature refrigeration . . . 193
Russell, J. P., Rollin, B. V., and Mills, J. R. A cryostat for electrical measurements on semiconductors . 75
Selektor, Ya. M., Zombrovskii, S. M., Ainutdinov, M. S., and Beketov, V. A. The sealing of glass viewing ports in liquid hydrogen bubble chambers 237
Shal'nikov, A. I., and Zavaritskii, N. V. The preparation of miniature carbon resistance thermometers for low temperatures 235
Specific heat at constant volume, the entropy, the internal energy, and the free energy of liquid helium-4 between 1·2 and 2·9° K, the: *O. V. Lounasmaa* 212
— — of liquid helium in Brenig's theory, on the: *W. E. Parry and D. ter Haar* 41
Specimens for calorimetry at very low temperatures, the cooling of: *J. Aslanian and L. Weil* . . 117

Stabilizer for low temperatures in helium cryostats, a: *A. N. Vetchinkin* 240
Strukov, B. A., Ermakova, L. A., and Koptsik, V. A. A precision laboratory cryostat for studying the electrical and elastic properties of crystals . . 222
Superconducting solenoid for the production of very high magnetic fields, the problem of the: *J. M. Lock* 243
Superconductive transition in a transverse field at various orientations for thin tin films, the: *J. M. Corsan* 180
Superfluidity and specific heat of liquid helium in 'Vycor' porous glass: *D. F. Brewer, D. C. Champeney, and K. Mendelssohn* 108
ter Haar, D., and Parry, W. E. On the specific heat of liquid helium in Brenig's theory 41
Thermal expansion at low temperatures, measurement of: *G. K. White* 151
Thermocouples, low temperature—I. Gold–cobalt or constantan versus copper or 'normal' silver: *R. L. Powell, M. D. Bunch, and R. J. Corruccini* . 139
Thompson, M. W., Chaudhuri, K. D., and Mendelssohn, K. The effect of radiation damage on the thermal conductivity of superconductors . . 47
Tomashchik, A. K. A high pressure bomb for optical studies at low temperatures 239
Transuranic substances, a cryostat for studying: *G. T. Meaden and J. A. Lee* 33
Van Dael, W., and Van Itterbeek, A. The velocity of sound in liquid argon and liquid nitrogen at high pressures 226
Van Itterbeek, A., and Van Dael, W. The velocity of sound in liquid argon and liquid nitrogen at high pressures 226
— *and Verbeke, O.* Density of liquid oxygen as a function of pressure and temperature . . 77
Vapour pressure curve, on the properies of: *E. H. Brown* 37
Velocity of sound in liquid argon and liquid nitrogen at high pressures, the: *A. Van Itterbeek and W. Van Dael.* 226
Verbeke, O., and Van Itterbeek, A. Density of liquid oxygen as a function of pressure and temperature 77
Vetchinkin, A. N. A stabilizer for low temperatures in helium crystals 240
Weil, L. Cryogenics and radiation damage . . 129
— *and Aslanian, J.* The cooling of specimens for calorimetry at very low temperatures . . 117
—, *Bochirol, L., and Doulat, J.* A cryogenic device for irradiation in liquid nitrogen . . . 44
White, G. K. Measurement of thermal expansion at low temperatures 151
Yaqub, M. Atomic heats of tin and tin–indium . 166
—. Cooling by adiabatic magnetization of superconductors 101
Zavaritskii, N. V., and Shal'nikov, A. I. The preparation of miniature carbon resistance thermometers for low temperatures 235
Zombrovskii, S. M., Ainutdinov, M. S., Beketov, V. A., and Selektor, Ya. M. The sealing of glass viewing ports in liquid hydrogen bubble chambers 237
